

Assignment Day 10 - Avg/mean/median

1. What is Average/Mean?

Mean is just a fancy number for average. To find an average of a set of values from 1 to 10, we would add up all these (1 to 10) numbers and divide them by 2. Average is used to check the average situation or condition.

2. What is the Median?

The median is the middle value in a series of numbers that shows the middle ground and is not messed up by large numbers in the list.

3. What is mode?

Mode is the most common value in a list of values.

How do we impute missing values? Find out the methods to impute missing values.

We can use multiple techniques to impute missing values. We use mode, mean, and median on the whole column to impute the missing values.
